

## Case Studies

This section includes case studies that use different geospatial methods and software packages to optimize project life cycle activities. These case studies demonstrate the usefulness of geospatial methods and the particular abilities of some common software packages. The case studies were chosen for their applicability to groundwater, soil, and sediment and for the variety of software applications that they present.

These case studies were performed for purposes other than this guidance document, were completed prior to the preparation of this document, and were done in context with individual project parameters and constraints. These real-world examples show how the software can be used to solve real problems, with limitations of time, resources, and specific project needs.

**Table 10. Summary of case studies**

Case study/location	Life cycle stage	Environmental medium	Methods	Software used	Contaminants	Applicable questions
<a href="#">Superfund Site, TX</a>	Monitoring	Groundwater	<ul style="list-style-type: none"> <li>• Mann Kendall</li> <li>• Voronoi/Delaunay mesh</li> </ul>	MAROS	VOCs, 1-2-DCA, Benzene, Metals	<ul style="list-style-type: none"> <li>• Trend Maps</li> <li>• Monitoring Program Optimization</li> </ul>
<a href="#">PAH in Sediments, Quebec, Canada</a>	Site Characterization	Sediment	<ul style="list-style-type: none"> <li>• Experimental variogram</li> <li>• Uncertainty</li> <li>• Conditional Simulations</li> <li>• Isatis</li> </ul>	Isatis	PAHs	<ul style="list-style-type: none"> <li>• Hot Spot Detection</li> <li>• Sample Spacing</li> <li>• Estimating Quantities</li> </ul>
<a href="#">Ordnance Plant, NE</a>	Monitoring, Closure	Groundwater	<ul style="list-style-type: none"> <li>• Kriging</li> <li>• Iterative Thinning</li> <li>• Quasi-genetic optimization</li> </ul>	GTS Summit Envirosolutions	TCE, Research Department Explosives (RDX)	<ul style="list-style-type: none"> <li>• Monitoring Program Optimization</li> <li>• Remedial Program Optimization</li> </ul>
